Laboratories

SLR Station

Astronomical
Pavillions

Point BOR1

Points BORP and
BORO

Main goals

better appearance of the SLR rooms and building
more comfortable working conditions for operator
better conditions for electronics – devices
new more effective control system

observations of the high satellites, mainly GALILEO
better efficiency, especially in the difficult weather conditions
improvement of the single shot precision and accuracy of
the satellite passes
participation in Eurolas Status Exchange

First step – renovation of the SLR building

last satellite pass: November 8, 2006

first satellite pass: March 17, 2007

modernization of the laser and operators rooms

new air-conditioned section for electronics

renovation of outside and inside parts of the SLR building

Adjustment of the Nd:YAG laser by service: April 24, 2007

single pulse instead two-three instable pulses

energy stability < 5%

Borowiec, Poland 7811

pass LAGEOS rms

ave 24.84 st_dev 5.44 max 51.86 min 10.19 for 769 data points

SLR Global Performance Report Card - 2007 2nd Quarter

short term stability (mm)

SLR Global Performance Report Card

July 1, 2006 - June 30, 2007

long term stability (mm)

Second step – modernization of the SLR system

last satellite pass: July 8, 2007

first satellite pass: ? probably October 2007

modernization of the optical parts of the telescope:

new cover of the main and secondary mirrors

installation of the new dielectric mirrors in Coude path with a new adjustment system of the mirrors

installation of a new transmitting telescope with remote adjustment of output beam divergence

new optical elements in receiving part (interference filter, neutral filters, collimation lenses, dielectric mirror, spatial filter)

installation of the sensitive CCD camera for control of the laser beam position, satellites and stars by the main mirror

installation of a new Hamamatsu

MCP-PMT R5916U-64-3MCP (QE 30%)

Software upgrading

New control system:

SLAVE computer – input/output control cards
MASTER computer – real time software
all under DOS or Linux operation systems

Effect:

faster and more effective operations
remote control of the most devices
more accurate gating system (max. 1 ns)
Eurolas Status Exchange
