15th International Laser Ranging Workshop

Analysis of 13 years (1993-2005) of SLR data on the two LAGEOS satellites for Terrestrial Reference Frames and Earth Orientation Parameters

→ Method to process SLR data for estimation of accurate time series

- Optimal data weighting*
- Geometrical estimation of orbital residual errors*
- Robust estimation of range biases (second poster)*

An original approach to compute Satellite Laser Range biases

→ Description of the temporal de correlation method
used to compute range biases
