New Charter adopted, because of rapid progress since the beginning of the Working Group

-> Will be on ILRS Website shortly

Time Transfer has developed very well with T2L2 and LRO. Now ELT may provide the next level because of the ACES module @ the ISS

-> We need a set of participating stations (requirements apply) in particular with good clock links - non common view links are of great interest.

However this is also a new level in laser safety. We are currently dealing with this.

-> Work in progress...
