The set of th

Why laser ranging to space debris?

- 1. Technology push from emerging capabilities!
- 2. Technology pull to support operational, modeling and mitigation needs set by the space debris population

At ESA:

- Space Situational Awareness (**SSA**) program with Space Surveillance and Tracking (SST) segment
- Research and development activities with
- operational aspects are run by ESA's Space Debris Office

nent.

NB: See 2015 talk *Laser ranging initiatives at ESA in support of operational needs and space surveillance and tracking* for a revisit of the motivation and objectives of the SLR-related activities at ESA in SSA/SST and Space debris Office SA UNCLASSIFIED – Releasable to the Public Flohrer, ILRS 2016, Potsdam, DE | 14/Oct/2016 | Slide 3

This talk

- (Motivation and objectives)
- Status and plans of the various and parallel SLR-related SST and Space Debris Office activities at ESA
 - Need of <u>coordinating multiple stations</u> through
 - Expert centre, coordinating the contribution of SST system-external loosely connected SLR sensors, and providing back calibration and expert evaluation support to the sensors
 - SCOOP as platform for collaborative (ad-hoc) multi-technique observations
 - Potential **benefits of laser ranging** in operations to
 - Resolve close approaches
 - Improve re-entry predictions
 - Support contingency situations
 - Determine attitude and attitude motion -combination of radar imaging, optical, SLR
- Standardisation needs (data exchange and sensor interfaces)
- ... references to subsequent talks in this session (Kucharski, Steindorfer, Sproll, Funke, Bamann)!

Benefits and top-level functions

Coordination overhead \rightarrow PROXY between a SST system backend and the sensors

Benefits

- Data quality checks and applying consistent modelling, feedback to sensors
- Centralized scheduler
- Standardisation of data exchanges
- Lower costs, functionality increases, performance gains
- **Expert** support (<u>calibration support</u>) and test environment

Functions

- External component to a SST System, not replacing any SST functionalities
- Interact with external (federated) optical Sensors and SLR Sensors
- **Operations functions:** Coordination and Qualification, SLA monitoring
- **Support functions:** Calibration, Evaluation, Quality control, Research support
- Expert groups (→ ILRS SDSG) and hosting experts to work with SST data

Expert Centre Status

- SSA activity led by AIUB(CH) with team IWF(AT), SpaceDys(IT), TU Prague(CZ)
- Done: Expert Coordination Centre's User requirements consolidation
- Done: Architecture and IF design consolidation
- On-going: Test campaign with passive robotic telescopes (Tenerife/Cebreros)
- On-going: SW tools and procedures consolidation
- Schedule:
 - CDR in November 2016
 - Test and demonstration 2017
- Further work in SSA period 3 (decision Dec 2016)

SCOOP Objectives

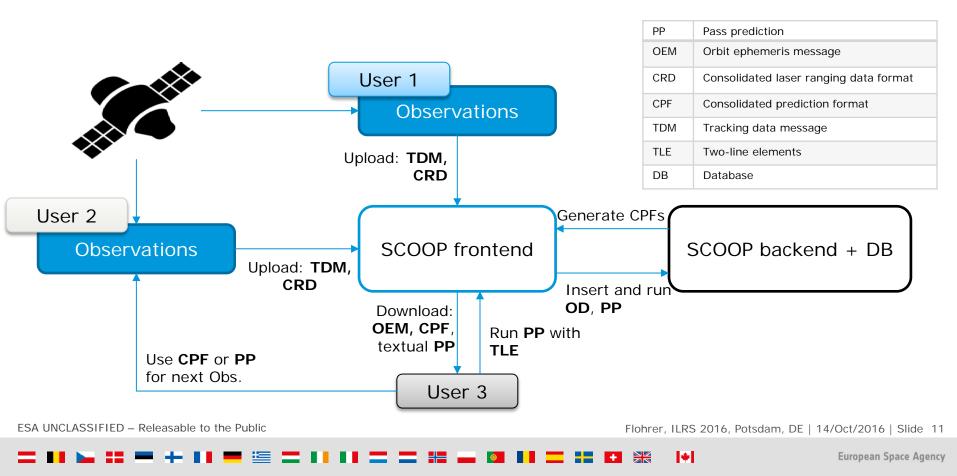

- Aims at multiple technologies, among them SLR
- Requirements from scientific space debris observer and modelling communities (e.g. in the IADC) for coordinated, collaborative, observations and other support functions to operations
- Design and implement prototype web-based platform hosted by ESA (SDO)
- Access to services in backend, allowing also to try out new methods:
 - orbit determination
 - pass prediction
 - data correlation
- Have dedicated user workshops to obtain feedback on the developed prototype and use this for optimizing the design

SLR for space debris research

- Typical technology pull \rightarrow comparably large volume studies at various TRL
 - <u>Attitude</u> status and attitude motion (contingencies, LEOPs, re-entries, removal missions)
 - **Orbit improvement** in short time from multi-static configurations (collision avoidance, contingency support, re-entries)
 - **Observation strategy** test and validation (stare and chase)
- **Technology development** in close coordination with ground station engineering and navigation support office
 - \rightarrow Mission support to ESA/non-ESA missions
 - \rightarrow Development of expertise in ESOC
- Key: participation in Space Debris Study Group of International Laser Ranging Service

ESA UNCLASSIFIED – Releasable to the Public

Determination of Attitude and Attitude Motion

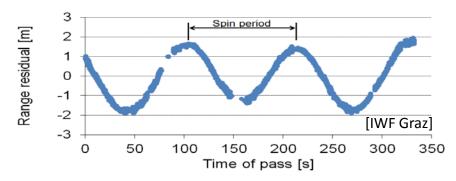

- Study with AIUB/FHR/HTG/IWF, 2015 \rightarrow 2017
- Exploitation of SLR/passive optical/radar imaging observation techniques:
 - Targets in LEO and GTO (spacecraft and upper-stages)
 - Data from collaborative approach as input for studying **removal technologies**
 - Develop mechanisms for a full investigation of the determination of the attitude motion vector and its evolution for **spacecraft contingencies**
- Develop **iOTA** a 6 DoF simulator for various force models, and prediction
- Conduct collaborative attitude measurements just done
- Long-term prediction of the attitude motion vectors (calibrate predictions)

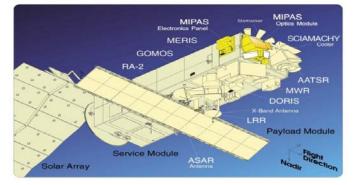

ESA UNCLASSIFIED – Releasable to the Public

Determining the Attitude State

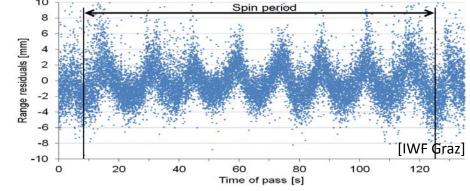

1) Analysis of meter-scale range oscillation due to 2.5 m offset between retro and spin axis of body.

2) Analysis of the millimeter scale oscillations of the SLR kHz range residuals

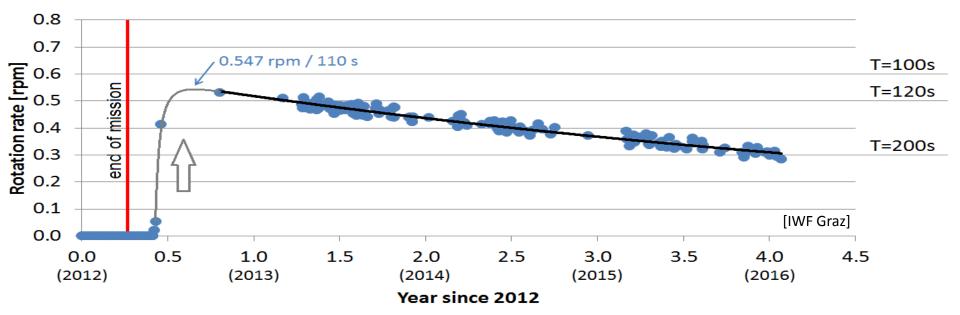

ESA UNCLASSIFIED – Releasable to the Public

retroreflector array of Envisat consists of 8+1 corner cube reflectors Flohrer, ILRS 2016, Potsdam, DE | 14/Oct/2016 | Slide 17

· = ■ ▶ = = + ■ + ■ ≡ = 1 ■ ■ = = 1 + ■ ■ ■ ■ ■ ■ ■ = = ** + •

ENVISAT: Inertial Spin, measured by SLR

The spin period of Envisat:

- increases by 72 ms/day
- doubles every 4 years
- will become equal to the orbital period (6000 s) in the year 2036

= II 🛌 :: 🖛 + II 🗮 🔚 = II II II = = :: :II 🖬 🖬 = II 💥 🙌

Tracking space debris for operational needs

- Study with DLR/IWF/TUM 2014 \rightarrow 2017
- User and system requirements
- Development of **hardware** components, software **algorithms** supporting operational needs, execution of (single/multistatic) **test campaigns**
- To demonstrate that
 - Space debris objects in LEO can be observed
 - Acquired data has been demonstrated to support collision avoidance and re-entry prediction needs at ESOC
 - Underlying orbit determination accuracy is known and validated
 - Benefits from active optical observations in supporting spacecraft operations have been identified and quantified

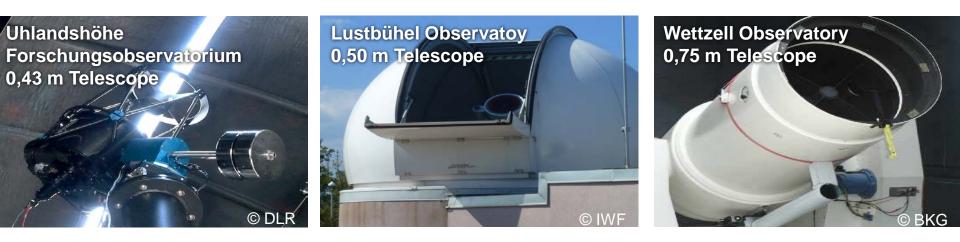

ESA UNCLASSIFIED – Releasable to the Public

= II 🛌 == + II == 🚝 == II II == == 🖽 🛶 🚺 II == == H 💥 🙌

Success in tracking of non-cooperative objects without reflector

- Ranging measurements to non cooperative targets (up to 2000km, 3m² area)
- Visible:
 - Rotation of objects visible
 - Finite dimension of objects
- Bi/Multi-static measurements done, different wavelengths
- Orbit improvements under study

ESA UNCLASSIFIED – Releasable to the Public

· = ■ ▶ = = + ■ + ■ ≡ = 1 ■ ■ = = = = ■ ■ ■ ■ ■ = = ** •

Stare and Chase

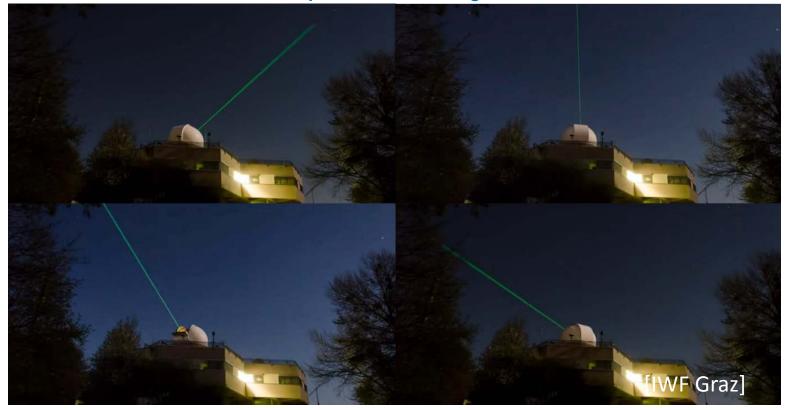

- Study with GMV (ES), AIUB (CH), IWF (AT); 2015/16
- Principle: Detected unknown from (any) surveillance campaign handed over to (any) tracking asset
- Tracking cooperative targets is well established!
- Learn about achievable data volume and quality vs. a-priori information needs
- Study needs set by assumed radar system
- **BUT**: Is it feasible to follow-up optical fence detections with SLR?
- Study extended to technical and operational requirements for hand-over between SLR and passive (co-located) sensors

ESA UNCLASSIFIED - Releasable to the Public

Data exchange with SST and OPS and sensor interfaces STANDARDISATION NEEDS

ESA UNCLASSIFIED - Releasable to the Public

Flohrer, ILRS 2016, Potsdam, DE | 14/Oct/2016 | Slide 24

_ II ⊾ :: ■ + II ■ ½ _ II II _ Z = :: II ▲ Ø II _ II . . .

Standardisation needs

- Consultative Committee for Space Data Systems (CCSDS) is "the language" among satellite operators, emerging also for SST needs
- Adopted as ISO standards, too.
- ESA SSA/SST adopts CCSDS formats

SLR:

- Has proven interfaces and converters available
- Hot items calling for support:
 - Specifics of laser ranging in CCSDS messages (e.g. Tracking Data Messages, ECEF Ephemeris)
 - Knowledge of CCSDS among laser stations (extend to Orbit Data Messages for states and ephemeris), new ideas in SST domain (Sensor Data Messages, Scheduling Messages)

ESA UNCLASSIFIED – Releasable to the Public

Flohrer, ILRS 2016, Potsdam, DE | 14/Oct/2016 | Slide 25

The set of th

CONCLUSION

ESA UNCLASSIFIED - Releasable to the Public

Flohrer, ILRS 2016, Potsdam, DE | 14/Oct/2016 | Slide 26

Conclusion

- ESA maintains **interest in SLR** to (non-cooperative) objects in the frame of the SSA Programme (SST) and as part of operational support and space debris research
- Several ongoing activities for SSA/SST **Expert Centres**, Operational **Support**, Attitude and **Attitude** motion determination, **Stare and Chase**
- ESA's SSA upcoming **P3** aims at testing and validation of functions with strong **technological focus** in a coherent SST segment based on enormous European expertise
- Driver from lessons learnt from past events: Support and facilitate collection of laser ranging measurements <u>quickly</u> after s/c failures, as **contingency** support and for later **ADR**!
 > SLR support in SCOOP, test campaign ahead!
- Further research ideas (incomplete!)
 - How can SLR help to track and discriminate and identify multiple small satellites?
 - Is there a way for laser-induced collision avoidance?
 - Which sensor technology developments are upcoming and are relevant for ESA (addressing SSA/SST or Space Debris needs)?

Are there specific needs for OD methods, can SLR support data correlation tests?

ABSTRACT SUBMISSION

Authors are invited to submit their abstracts according to the procedure described below. Each abstract (approximately 500 words) should clearly outline major achievements and innovative ideas. Papers will be selected on the basis of:

- interest in the subject by the target audience
- relevance to the conference topics
- originality of the ideas presented
- · quality and clarity of the content

Papers must be submitted in English, according to the "instructions to authors". English will also be the working language at the conference.

Abstracts must be submitted by 15 Nov 2016

A "No Paper - No Podium" rule applies.

TARGET AUDIENCE

The conference will provide a unique forum for information exchange, technical discussions and networking between space debris researchers, engineers & decision takers of industry, policy makers & space lawyers, insurance underwriters, space & ground system operators, institutional organisations (e.g. space agencies, EU, UNCOPUOS, IAA, COSPAR), academia and the defense sector.

IMPORTANT DATES

15 Nov 2016	Deadline for abstracts
16 Dec 2016	Notification of authors
24 Feb 2017	Final Programme
10 Apr 2017	Deadline for papers
18 - 21 Apr 2017	7th European Conference on
	Space Debris

CONFERENCE VENUE

European Space Operations Centre ESA/ESOC, Robert-Bosch-Strasse 5 64293 Darmstadt, Germany

REGISTRATION FEES

Early registration € 450 (students € 225) After 20 Jan 2017 € 500 (students € 250)

Fees include the proceedings, a reception, free lunches and coffee breaks.

POINT OF CONTACT

Conference website conference.sdo.esoc.esa.int
